Reference# : Glare & Heat Reduction,
Saxon Clinic

Thank you for inviting us to provide you with this quotation, I am pleased to offer the following solutions below.

| # | Item & Description | Qty | Rate | Amount (excl. VAT) |
|---|---|------|----------|--------------------|
| 1 | <p>Hanita Silver20 A silver reflective mirror film providing high levels of glare and heat reduction along with one-way daytime privacy.</p> <p>Performance on Clear Double Glazed Units :</p> <ul style="list-style-type: none">• Visible Light Transmission - 15%• Internal Reflection - 58%• UV Rejection - 99%• Heat Gain Reduction - 58%• G-Value - 0.31• Total Solar Energy Rejection - 69%• Glare Reduction - 81% <p>12 year Installation Warranty against bubbling, crazing and peeling when installed by a Approved Dealer.</p> <p>Total cost to supply & fit to the following, is :</p> <ul style="list-style-type: none">- Admin Office Roof-lights ;- Admin Side Office Roof-lights ; and- Endoscopy Corridor Roof-lights. <p>Notes :</p> <ul style="list-style-type: none">- All work off access equipment and Out-of-Hours.- Blinds to be removed by yourselves prior to film installation. | 1.00 | 2,385.00 | 2,385.00 |
| 2 | <p>Access Hire 4.2m Mobile Tower (min 1week hire including delivery & collection)</p> | 1.00 | 45.00 | 45.00 |

Project Requirements: Glare & Heat Reduction

Further to my site visit and meeting with Robert Brown today, the requirement is for both glare and heat reduction from the roof glazing in Admin Office, Admin Side Office and Endoscopy Corridor.

Based on this, please find film specification above along with the cost to supply & fit.

Robert mentioned Tuesday, Saturday & Sunday are the best days for installation. The work will take 2 days, so Saturday & Sunday are the best days for filming.

Robert asked for a quote for blinds removal, which will be required prior to film installation.

Glare Reduction. The darker the film, the lower the visible light transmission and the more glare that will be reduced.

Solar Gain. The ability of a window (or window with film) to reflect and absorb solar gain is called Total Solar Energy Rejection. The solar gain which actually passes through the window is known as the Solar Heat Gain Coefficient or G-Value. The reduction of actual solar heat gain by a window film is therefore the percentage reduction in G-value.

The following was also mentioned to Robert ... With all internal applications of solar film, there is a minor risk of thermal stress breakage of the glass, if the glazing in place is non-toughened glass. However, this risk is minimal. We can only assume that the windows are glazed in accordance with BS6262 Glazing Code of Practice and that there are no existing edge faults within the frame rebate. If the small risk of thermal fracture should occur due to any existing/inherent weaknesses/damage in the glass then we cannot foresee this and hence we are not liable.

In order to ensure a satisfactory application of window film, the area needs to be clean and dust free. All blinds and furniture etc should be removed prior to application of film; our operatives cannot be responsible for any damage incurred

Costs for Out-of-Hours with clean and clear access to all windows in one project visit.

Terms & Conditions

Attached in separate document on your email.

All prices are subject to VAT at 20%.

Window film is outside the scope of CIS and hence the VAT Reverse Charge does not apply.

50% Deposit required.
