### Ripplefold | Drapery Tape Assembly

The bottom of the drapery track is to be mounted such that it is located a distance of 1/2 in (13 mm) + fabric panel height from the floor. Drapes are typically sized so the bottom of the drapery track and top of the fabric panel are located 4 in (101 mm) above the window casing. Location may need to be adjusted to accommodate the specific fabric panel height and application. It is recommended that a space of 1/2-1 in (13-25 mm) be maintained between the bottom of fabric panel and the floor.

#### One-way draw

#### Center draw

#### NOTES

- Drapery track system compatible with Graber ripplefold snap tape

### Ripplefold | Drapery tape assembly (continued)

The Ripplefold drapery snap tape is attached to the top of the fabric panel by the drapery manufacturer. The number of snaps required is based on the Track Width, Draw Type and Fullness of the drapery. Refer to the Shade Configuration Tool (SCT) for the number of snaps required per panel for the given specifications. Left draw and Right draw configurations require one fabric panel. Center draw and Tandem draw configurations require two fabric panels. The Lutron Ripplefold drapery system is compatible with Graber snap tape, which has a spacing of 4 1/4 in (108 mm) between snaps. The Buttmaster Carriers and the End Snap Brackets, require the outermost snap on both ends of the snap tape to be spaced 1 in (25 mm) from the adjacent snaps.
