Security

Aluminium Roller Shutters

Overview

Although often overlooked, securing your property provides peace of mind by protecting the things that matter most to you, whether that's your home and family or your business and consequently your livelihood. With so much choice, choosing a security product that most suits your needs can seem like a daunting task but our industry leading products will be able to address all of your requirements.

Besides securing your property, many AMO Group products offer other benefits such as insulation and sound proofing, ventilation, or increased advertising space for your business by use of special graphics.

The emphasis behind our range of aluminium roller shutters is on integration into your building and way of life; unobtrusive, attractive and easy to use. They will help complement the look of the building, and are effective and secure in daily use.

Aluminium roller shutters are also the ideal solution for bars, kiosks, canteens and cabinets due to their neat unobtrusive appearance.

AMO Group offer the largest range of aluminium roller shutter in the UK, ranging from foam filled, single skinned extruded, double skinned extruded, perforated and punched profiles, polycarbonate glazing can also be incorporated into the curtains of perforated and punched profiles.

All products are supplied and installed by our own team of fully trained engineers who will be able to offer expert guidance and advice to ensure a tailor made solution.

Manual

Manual spring & lock or crank gearbox roller shutters are ideal when there is no power available for electric operation or the shutter will not be opened very often.

This solution is not recommended on applications with a large number of shutters due to the time required to open and close all the shutters.

Electric Tube Motor

Electric tube motor roller shutters require single phase power. In commercial and retail applications this product offers a more aesthetic solution than a shutter powered by an external motor and also requires less space to install.
