

Georgian Double Hipped

Survey dimension sheet – all dimensions should be measured from inside. If possible measure in mm and give dimensions to the nearest 5mm. Watch the video to get tips on where to measure from.

 <p>The diagrams show a top-down view of a Georgian double hipped roof. The top diagram is a detailed plan with two gables. The width of each gable is labeled as 2200. The overall width from fascia to fascia is labeled X1. The overall length from fascia to fascia is labeled Y1. A smaller dimension of 2700 is also indicated. The bottom diagram is a simplified outline of the roof plan with X1 labeled across the width.</p>	<p>Main Plan Dimensions</p> <p>The most important dimensions are the overall length and width of the space. Measure the width (X1) from fascia to fascia and the length (Y1) from fascia to fascia.</p> <p>X1 = 5280 ✓ Y1 = 2700 ✓</p>
 <p>The diagram shows a side elevation of the roof. It illustrates the vertical dimensions H1 and H2. H1 is the height from the floor to the top of the fascia. H2 is the height from the floor to the underside of the ridge. The overall height from the floor to the ridge is labeled as 2280.</p>	<p>Heights</p> <p>In order to work out the full area of the roof we need the vertical dimension to the bottom and top of the roof. Measure H1 from the floor to the top of the fascia and H2 from the floor to the underside of the ridge.</p> <p>H1 = 2270 ✓ H2 = 2060 ✓</p>
 <p>The diagram shows a side elevation of the roof with the ridge length R1 indicated as the distance between the centers of the two capping pieces.</p>	<p>Ridge Length</p> <p>Measure from the centre of the capping piece to the centre of the capping piece. If you have a light or fixture at either end, measure from the middle of that and be sure to include an extra photo of this.</p> <p>R1 = 2680 ✓</p>
<p>Additional Dimensions: Use the final section to provide dimensions of any large box outs that may affect the design. If you want you can also include dimensions for opening windows, lights or fans but we will also cover this later in the process if it is required.</p>
