MAINTENANCE

EASY MAINTENANCE WITH THE RENSON MAINTENANCE SET

Your patio cover will be fully exposed to the elements for years - day in and day out. If you want to get the most out of your Renson® cover indefinitely, we recommend maintaining it regularly, i.e. once or twice a year. Regular maintenance will extend the lifespan of your cover. The following are important:

- The structure is made using powder coated aluminium. An annual cleaning with Renson Maintenance Set products will ensure that the intense colour is maintained for years, as well as providing extra protection from acid rain, sea air and UV radiation. For coastal or wooded areas, we recommend maintenance of your installations at least twice a year.
- The Renson 'Clean' is a concentrated product with strong cleaning and degreasing properties to deal with the most frequent kinds of natural filth, such as dust, oily precipitation, grease stains, moss, insect remains, etc. This product cannot be compared to other cleaning products on the market. It sinks deeply and 'lifts out' the dirt. Renson 'Clean' can also be used to clean polyester roof fabrics and vertical fibreglass screen fabrics. After cleaning, you must protect the aluminium structure with Renson 'Protect'. This leaves a protective film that allows the surface to be cleaned by simply wiping it down with a minimum amount of Renson 'Clean'. It also protects the aluminium from acid rain, sea air and UV radiation, and ensures the colour remains just as intense.
- Do not use either product in direct sunlight or in hot weather. The product's quick-drying action can leave stains on the structure or the fabric. Do not use corrosive or aggressive products, scouring pads or other scouring products. Do not use high-pressure equipment under any circumstances.

For more information about our outdoor products, you can consult [our brochure](#).
