- The power cables for each blind has been requested to come out of the wall (Up Stairs) and ceiling (Down Stairs) in a location which will be hidden by the installation of each blind. (Please see attached image.) With the downstairs ceiling installation we will require a hole large enough that we can insert the cable adapter into the ceiling so that nothing is on show from the front or rear of the blind.
- We will be supplying the Transformer to your electrician for installation prior to our installation date, so we can connect the blinds directly to it.
- The original fabric from the bedroom blinds has been confirmed with a current fabric by Luxaflex displayed on your estimate. This was established from the original manufacturing label on the bedroom blinds. (Please see attached image.)
- The quote is offering the latest PowerView 2 roller blind motors.
- The quoted pebble handset will be for use with the new blinds in the lounge only, using the existing handsets in each bedroom.
- You can control your blinds via the PowerView app, though you would be required to purchase the hub and I would **estimate** 2 extenders to ensure signal coverage throughout the property. The hub has a cost [REDACTED] and the extender [REDACTED]. The hub give full control over all blinds whilst being on the same Wi-Fi connection and automation control remotely, If you would like further information on this please let me know.
- Please see the following link demonstrating the capabilities of the PowerView app
<https://youtu.be/aXcbfFTRIn3>

Moving forward with new blinds, we will need to revisit the property once the work on the floor and ceiling in lounge are complete so we can do a survey before ordering.

I believe I have covered all of your questions, though please do come back to me if you have any further questions or concerns.

Kind Regards

Will
