DURASEAL+ TREATMENT

Certificate number: 19762
Date of issue: 05/03/2026
Report reference: 01595.26
Job reference: 97872
Customer reference: 27396 Whitworth

Customer: Posner Interiors
98 George Lane
South Woodford
London
E18 1AD

PRODUCT DESCRIPTION

25.00 Linear Metre **Colefax and Fowler Otto J0293-07 col. Biscuit - Tan and Beige two-tone textured plain woven fabric**
(100% solution-dyed polyester)

TREATMENT

In accordance with the customer's requirements, the product was treated with a **Duraseal+** Water and Soil Repellant formulation by Fabric Flare Solutions Limited.

AFTER CARE

All spills should be mopped up with a sponge or clean cloth as soon as possible. Only warm water should be used to remove stains. Detergents, and/or mechanical abrasion can deteriorate the repellancy. For more stubborn stains, we recommend the employment of a specialist cleaning contractor.

IN-HOUSE ASSESSMENT

A treated sample was subjected to a water and oil drop test in-house.

RESULTS

For a **Duraseal+** treated fabric to be considered 'suitable for use', two out of three water droplets, and two out of three oil droplets, must still be visible as 'spherical to hemispherical' drops, for a period of 3 minutes from the time of 'wetting'.

The results indicate that the treated fabric can be considered 'suitable for use'.

NOTE

In the absence of any recognised standard governing the performance of water and soil repellancy treatments, and with variable traffic conditions in every location, Fabric Flare Solutions Limited cannot guarantee the effective life of a **Duraseal+** treatment. However, the product has been used extensively in hotels, schools, clubs and offices, without evidence of any deterioration over a three year period, and the empirical data supports a continuation of satisfactory performance after this trouble-free period.

PLEASE NOTE

1. Our in-house tests only provide an indicator of compliance. This certificate does not have fully accredited status and cannot be used or substituted as such.
2. No liability will be accepted by Fabric Flare Solutions Limited for any changes in appearance or quality if the treated product is subjected to processing of any kind after treatment. Additional processes may not only affect the look of the treated material, but could also diminish the effectiveness of the repellancy.
3. Bearing in mind that Fabric Flare Solutions Limited has no control over end use, we recommend that the validity of this treatment confirmation be considered after a period of three years.
