## Processing recommendations for aluminium backed textiles

Curtain textiles with aluminium backing have the benefit of regular room temperature and light situation in rooms giving a pleasant indoor climate. This may also reduce the costs of air conditioning.

### Features:

- reflective
- textile character
- high light fastness
- fire retardant

However, aluminium backed textiles also have challenges. Aluminium backing is sensitive to mechanical influence and chemical reaction.

Avoid too much handling during sewing, transport and mounting. To avoid fingerprints on the metal layer, it is recommended to wear white textile gloves during processing. Additionally, please make sure to use a curtain draw rod when pulling or drawing the curtains.

### Avoid in any case:

- All strong alkaline heavy-duty detergents
- Bleach or optical brightener
- Chlorine or agents containing chlorine

### Processing:

- The thin metal layer is sensitive to creases and folds. Avoid wrinkles and creases when making the curtain. If necessary, light creases and wrinkles can be removed on the colour side by light ironing without steam.

### Attention:

- Every cleaning process can dull the reflection of the surface slightly. We recommend following the care instructions thoroughly!
