

Installation instructions

# Drop Arm system

## Installation instructions – Drop Arm

1. For the correct installation of the Drop Arm product, follow the installation instructions step by step, do not perform the operation alone, observe the safety restrictions. Assembly parts and tools must be kept out of sight of children or persons not involved in the assembly.

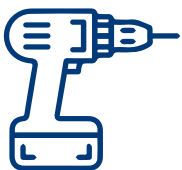

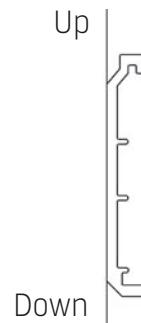

**CAUTION!** Installation and mounting should be carried out by trained staff.

**OPEN  
CAREFULLY**

2. During unpacking, take care not to cut the tape which secures the arms and not to scratch the product.

3. Mark the places where the mounting holes for the wall fixings will be made. Pay attention to the width of the product - place the fixings so that they are at the same spacing. Remember to maintain a level.

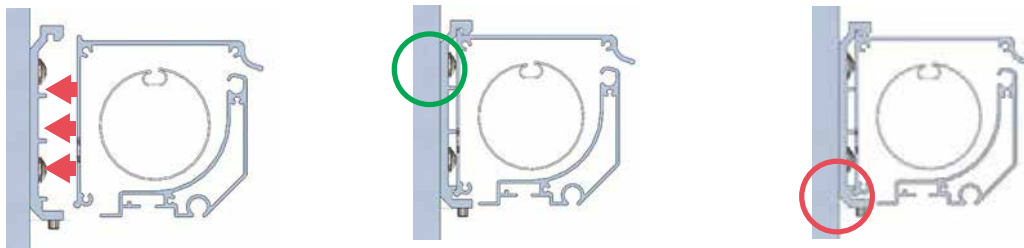

4. On the marked places the mounting holes have to be made.

5. Screw the wall mountings to the wall.

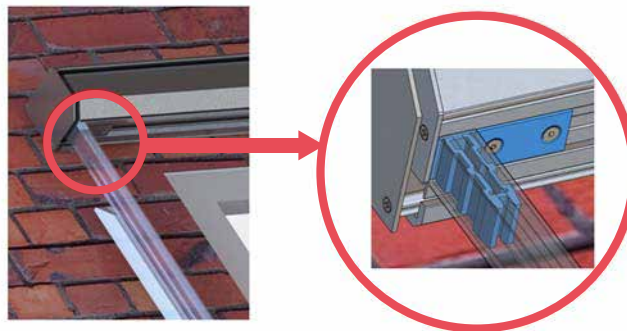

Match the proper screws so that the screws do not interfere with the box.

On the mountings wall install the box, then tighten the set screw which is placed in the mounting wall.

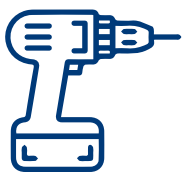

6. Screw the secured arms loosely into the front front slat and mark the 4 mounting points.

Place the arm mounts as close as possible to the side edges of the slat, a maximum distance of 10 cm from the edge is allowed. For a product with 3 arms, place the third arm in the middle.

7. Disassemble or move the arms and drill the mounting holes at the marked places.

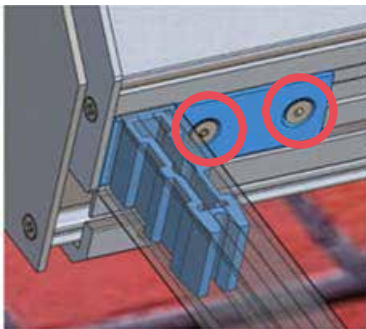

8. Screw the arms with the screws into the bottom holes.

9. Connect the power supply in case of motor or crank drive. After cutting the tape securing the arms, roll out the product slightly to screw the arms into the upper mounting holes.

10. Screw the arm mounting from the both sides of the product.

11. Test the product function, set the upper and bottom end position.
