<b>Status</b>	Completed

## Prototype: [Figma link](#)

## Purpose

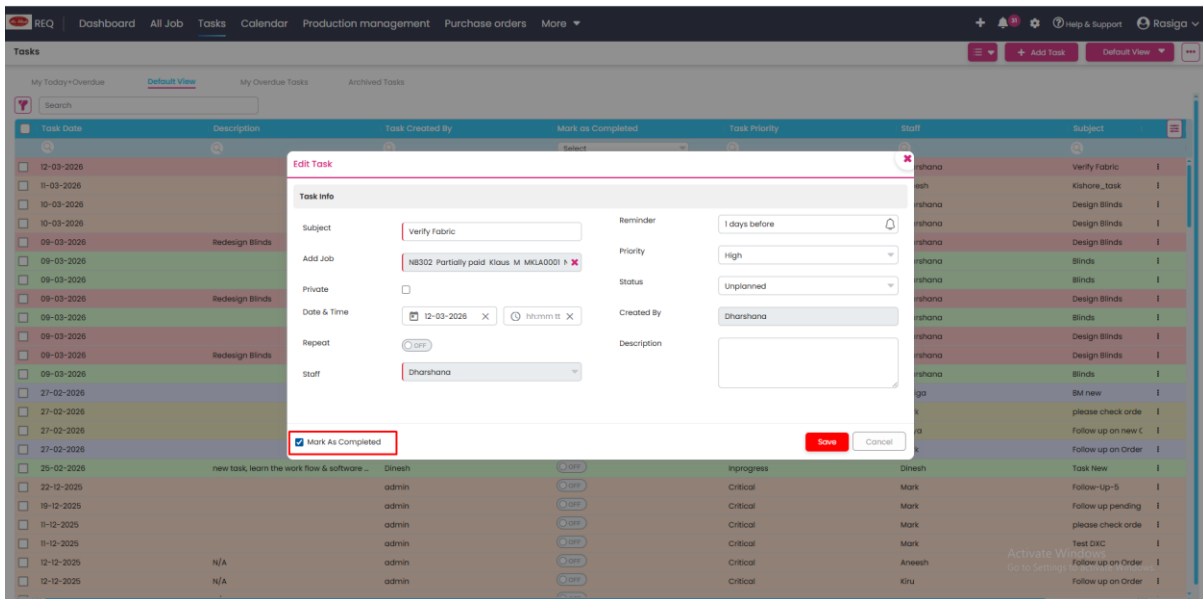

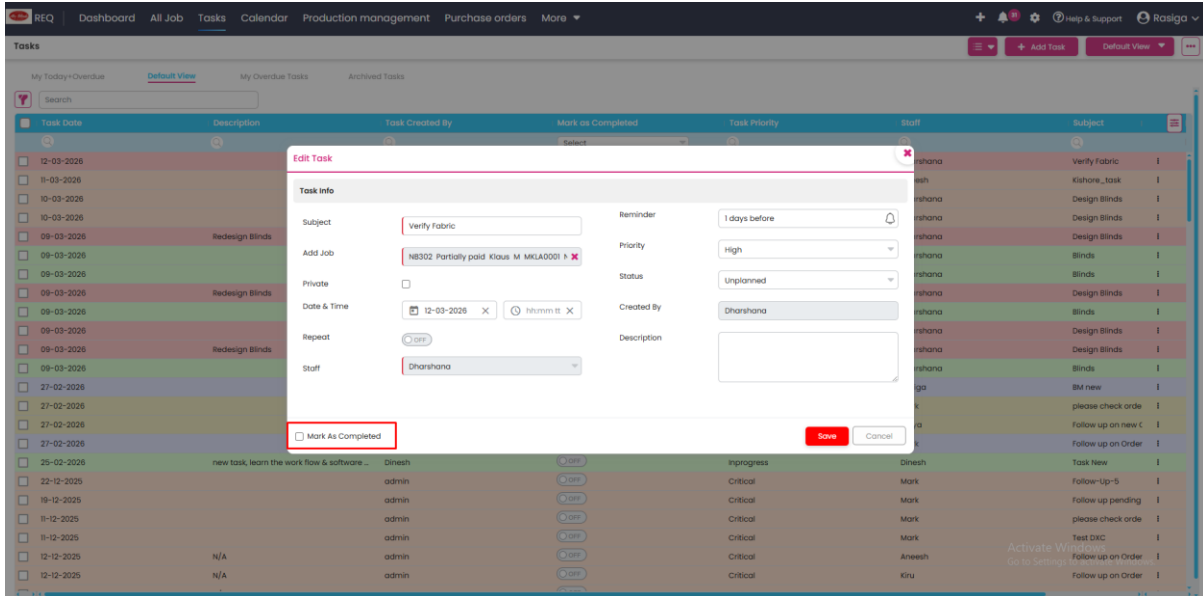

This feature enables a user to mark a task as completed for **all assigned users** when the task has been allocated to multiple users.

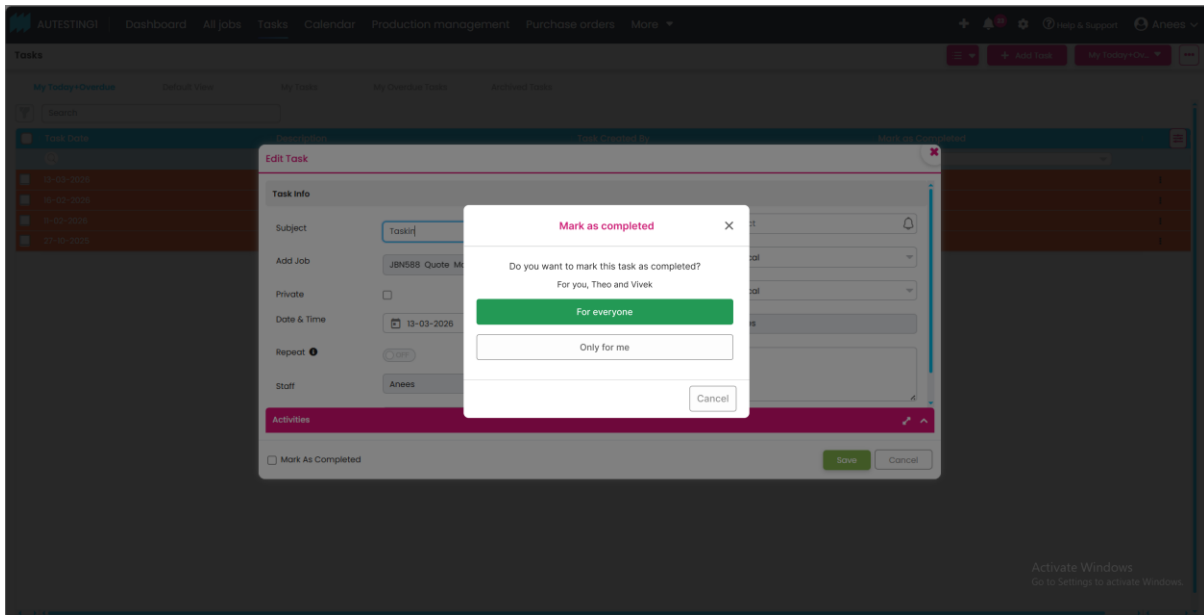

When a task is assigned to multiple users, the customer wants the system to provide an option so that if one user completes the task, they can choose whether the completion should apply:

- **For everyone, or**

- **Only for me.**

# This requirement applies to the task completion flow.

## Business Requirement

When a task is allocated to multiple users, and one user clicks **Mark as completed**, the system shall allow that user to decide whether the task should be completed for:

- **all assigned users**, or
- **Only the current user**.

## Popup Behavior

### For everyone

When the user selects **For everyone**:

- The system shall mark the task as **Completed** for all users assigned to that task.
- The task shall be treated as fully completed in the system.
- All assigned users shall see the task status as **Completed**.

### Only for me

When the user selects **Only for me**:

- The system shall mark the task as **Completed** only for the currently logged-in user.

- Other assigned users shall continue to see the task as pending or incomplete until they complete it themselves or another user marks it for everyone.
- The task shall not be treated as globally completed unless all assigned users are completed.

## Cancel

When the user selects **Cancel**:

- The popup shall close.
- No status change shall be made.

## Single-User Task Completion

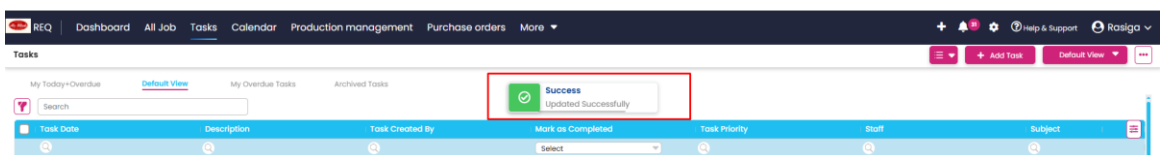

If the task is assigned to only one user:

- The system shall not display the multi-user completion popup.
- On clicking **Mark as completed**, the task shall be marked as **Completed** directly.

## Completed Status Display

After successful completion:

- The task status shall display as **Completed**.
- A confirmation message shall be shown in the UI, such as:

This behavior shall be shown after:

- completion for everyone, or
- Completion for the current user, where applicable for that user's view.
